

FIG. 1 is a perspective view of a device 20, which includes a base 22 and a coil 24. The base 22 is a cylindrical component with three circular openings 25. The coil 24 is a helical spring that is wound around a central shaft 30. The coil 24 is connected to a terminal 34. The base 22 is also connected to a terminal 32. The coil 24 is shown in a compressed state, with the terminal 34 positioned near the terminal 32. The device 20 is shown in a perspective view, with the base 22 and the coil 24 being the main components. The base 22 is a cylindrical component with three circular openings 25. The coil 24 is a helical spring that is wound around a central shaft 30. The coil 24 is connected to a terminal 34. The base 22 is also connected to a terminal 32. The coil 24 is shown in a compressed state, with the terminal 34 positioned near the terminal 32. FIG. 14A is a cross-sectional view of a device in a first state, and FIG. 14B is a cross-sectional view of the device in a second state. The device includes a housing 152 and a central component 233. The central component 233 is shown in two different positions, indicating a change in state. The device also includes a central opening 152 and a central component 233. The central component 233 is shown in two different positions, indicating a change in state. The device also includes a central opening 152 and a central component 233.
